

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THIRTEENTH ANNUAL REPORT

RELATING TO THE

REGISTRATION AND RETURN

OF

BIRTHS, MARRIAGES, DIVORCES, AND DEATHS

IN NEW HAMPSHIRE

FOR THE YEAR 1892.

VOLUME X. . . NEW SERIES.

CONCORD:

EDWARD N. PEARSON, PUBLIC PRINTER.

1893.

PRINTED BY
REPUBLICAN PRESS ASSOCIATION,
CONCORD, N. H.

THE STATE OF NEW HAMPSHIRE.

OFFICE OF THE REGISTRAR OF VITAL STATISTICS,

CONCORD, November 1, 1893.

To His Excellency the Governor and the Honorable Council:

1-12-93
I have the honor to submit herewith, in accordance with the laws of the State of New Hampshire, the thirteenth annual report relating to the registration of births, marriages, divorces, and deaths in this state for the year ending December 31, 1892.

The number of births reported in the state for the year 1892 was 7,746, or 236 more than was reported in 1891; the number of marriages was 4,074, or 170 more than was returned in 1891; the number of deaths was 7,988, or 678 more than in 1891.

State of New Hampshire
The total population of the state, according to the census of 1890, is 376,530, and the proportion of births, marriages, and deaths to each one thousand of the population is as follows:

Birth-rate, 20.57; marriage-rate, 10.81 (couples); death-rate, 21.21.

The tables have been arranged substantially as in the last registration report.

Reference should be had to the index at the end of this volume for any subject included in this report.

Respectfully submitted,

Irving A. Watson

Registrar of Vital Statistics.

339015

SUMMARY OF REGISTRATION REPORT.

Without vital statistics it would be impossible to intelligently adopt and put into efficient execution measures for the restriction and prevention of disease, because there would be no basis of determining the necessity of action or for measuring its results. Fortunately, through the untiring efforts of several years, we have, in New Hampshire, arrived at a period of accuracy and completeness in the registration of deaths second, probably, to that of no state in the Union, and which is of great value and importance to the state from more than one stand-point.

The total number of deaths returned to the registrar of vital statistics for the year ending December 31, 1892, was 7,988. This is 678 more than was returned for the year 1891, and 1,153 more than the average for the past nine years.

This excess over the average for the years stated is not due wholly to an actual increase in death-rate, but to a more complete registration than existed during the earlier years of the period embraced in the comparison. Still it is true that the death-rate has increased,—due chiefly, it would seem, to epidemic influenza. The progressive march of this disease is indicated by the deaths attributed directly to it, as follows:

Deaths from epidemic influenza (la grippe)	1889	.	.	4
" " " "	1890	.	.	94
" " " "	1891	.	.	143
" " " "	1892	.	.	381

That this malady is responsible for an increased death-rate from other diseases, there is no doubt. Pneumonia was increased from 673 deaths in 1891 to 890 in 1892. Other indications pointing to this conclusion may be seen by a careful examination of the tables presented :

TABLE No. 1.

Population of Counties in 1880 and 1890.

COUNTIES.	1880.	1890.
Rockingham.....	49,064	49,650

1883.....	355,874	1890.....	376,530
1884.....	358,845	1891.....	379,491
1885.....	361,806	1892.....	382,452
1886.....	364,767		

*Population estimated for all but census years.

The above figures, except for census years, are estimated upon a basis of a steady increase in population in the same ratio as was shown between the census returns of 1880 and 1890. It is believed that these figures are approximately correct for the years represented.

TABLE No. 3.

*Births, Marriages, and Deaths, with the Population and Rates, for 1884 to 1892, inclusive.**

Average

* Population estimated for all but census years.

Table No. 3 shows the population of the state, the number of births, marriages, and deaths, with the birth, marriage, and death rate to each 1,000 of the population for the years 1884 to 1892, inclusive.

An average for these years is also given.

BIRTHS.

There were returned for the year 1892, 7,746 births, or 236 more than there were reported the previous year, more than was ever recorded in a single year.

The birth-rate to each 1,000 of the population for the year is 20.57.

TABLE No. 4.

Births in Cities for 1892, with Rate per 1,000.

CITIES.	Population of 1890.	Births.	Birth-rate per 1,000.
Portsmouth.....	9,827	161	16.38
Dover.....	12,790	296	23.14
Concord	17,004	416	24.46
Manchester.....	44,126	1,029	23.31
Nashua	19,311	698	36.14
Keene	7,446	150	20.14
Rochester.....	7,396	137	18.52
Laconia.....	6,143	172	27.99
Somersworth	6,207	196	31.57

The birth-rate and percentages for the several cities are given in table No. 4.

TABLE No. 5.

Percentage of American and Foreign Births, by Counties, 1892.

COUNTIES.	PARENTS.			Births with parentage not stated.
	American-born.	Foreign-born.	One foreign born.	
Rockingham	526	140	114	17
Strafford.....	340	344	108	16
Belknap.....	197	120	63	15
Carroll.....	212	40	33	24
Merrimack.....	476	341	143	28
Hillsborough.	726	1,178	296	86
Cheshire.....	329	174	79	29
Sullivan.....	212	55	65	7
Grafton.....	430	78	84	26
Coös.....	198	257	120	20
Total for state	3,646	2,727	1,105	268

A statement of the births by counties for the past eleven years may be found in table I, page 4. Other facts relating to births may be found in tables III and IV.

MARRIAGES.

The number of marriages returned for the year 1892 is 4,074, the largest number ever reported in a single year, as will be seen by the following table:

TABLE No. 6.

Marriage-rates for 1882 to 1892, inclusive.

YEARS.	Marriages.	Persons married to 1,000 living.*	Number living to one marriage.
1882.....	3,433	19.44	103
1883.....	3,495	19.68	102
1884.....	3,292	18.34	109
1885.....	3,180	17.56	114
1886.....	3,324	18.22	109
1887.....	3,495	19.00	105
1888.....	3,379	18.22	109
1889.....	3,621	19.36	103
1890.....	3,621	19.22	103
1891.....	3,904	20.72	97
1892.....	4,074	21.30	93
Average	3,529	19.18	104

* Population estimated for all but census years.

TABLE No. 17.

Deaths and Death-rates from 1884 to 1892, inclusive.

YEARS.	Deaths regis- tered.	Deaths to 1,000 of population.	Population.*
1884.....	6,194	16.26	358,845
1885.....	6,201	17.13	361,806
1886.....	6,426	17.61	364,767
1887.....	6,470	17.61	367,728
1888.....	6,854	18.48	370,689
1889.....	6,696	17.91	373,650
1890.....	7,368	19.56	376,530
1891.....	7,310	19.41	370,491
1892.....	7,968	20.88	382,452
Average	6,835	18.32

* Population estimated for all but census years.

Table No. 17 gives the number of deaths returned for each year from 1884 to 1892, inclusive, with percentage to each 1,000 of the estimated population.

It will be seen by this table that the death-rate per 1,000 of the population for the year 1892 is 20.88, the highest recorded during the period embraced in the table. This rate is somewhat in excess of what we believe should be maintained in this state.

TABLE No. 18.
Deaths and Death-rates, by Counties, from 1884 to 1892, inclusive.

COUNTIES.	1884.		1885.		1886.		1887.		1888.		1889.		1890.		1891.		1892.

Total	6,194	17.26	6,201	17.13	6,426	17.61	6,479	17.61	6,864	18.48	6,696	17.91	7,963	19.56	7,310	19.41	7,968	21.21

Table No. 18 shows the number of deaths and the death-rate per 1,000 of the population, census figures. The percentages being based upon the census returns, cannot, of course, be absolutely correct, excepting for the year 1890; therefore the total percentage for 1892 is in this table too high. The figures given in table No. 17 (20.88 per 1,000) are more nearly correct.

The highest death-rate in any county for the year 1892 is in Strafford—22.47, followed by Hillsborough 22.43, Belknap 21.65, Merrimack 21.52, Sullivan 21.49, Rockingham 20.66, Cheshire 20.55, Grafton 20.01, Carroll 18.87, Coos 18.13.

TABLE No. 19.

*Percentages of Deaths, by Quarters, from 1884 to 1892, inclusive.**

YEARS.	PERCENTAGES OF DEATHS FOR QUARTERS ENDING WITH			
	March.	June.	September.	December.
1884.....	23.23	23.40	26.63	26.74
1885.....	27.27	26.66	24.32	21.75
1886.....	23.75	23.27	28.90	24.06
1887.....	24.56	24.02	27.77	23.65
1888.....	25.94	23.72	26.82	23.52
1889.....	23.70	24.16	27.38	24.76
1890.....	28.82	21.63	26.71	22.84
1891.....	22.36	21.15	26.89	26.58
1892.....	34.97	21.41	23.99	19.63

* Not including deaths with month not stated, premature and still births.

Table No. 19 shows the percentages by quarters, from 1884 to 1892, inclusive. The variation in the percentages for 1892 from those given for the previous year is very

marked, and is due to the erratic course of the epidemic influenza. In 1891 this disease prevailed more severely in the second and fourth quarters of the year, while in 1892 its greatest mortality was in the first quarter of the year. Again in 1892 there was a great reduction in the death-rate from cholera infantum, which reduces the percentage of the third quarter below that of any previous record.

The rate for the first quarter of the year 1892 is 34.97 of the total mortality; second quarter 21.41, third quarter 23.99, fourth quarter 19.63.

TABLE No. 20.

Mortality of Males and Females compared 1884 to 1892 inclusive.

YEARS.	Male decedents.	Female decedents.	Male decedents to 100 female decedents.	Death-rate of males to 1,000 male population.	Death-rate of females to 1,000 of female population.
1884.....	3,034	3,122	97.18	17.79	17.69
1885.....	2,948	3,104	92.29	17.28	18.09
1886.....	3,155	3,212	98.20	18.50	18.20
1887.....	3,174	3,267	97.15	18.61	18.51
1888.....	3,419	3,382	101.09	20.04	19.16
1889.....	3,253	3,389	95.98	19.07	19.20
1890.....	3,692	3,624	101.87	21.65	20.53
1891.....	3,557	3,453	103.01	19.60	17.65
1892.....	3,961	3,990	99.77	21.33	21.00
Average.....	3,357	3,407	98.50	19.32	18.89

Table No. 20 exhibits the mortality of males and females compared for the years 1884 to 1892, inclusive. With the

exception of the years 1888, 1890, and 1891, the female decedents have exceeded the males. By a comparison of the death-rates of the respective sexes to each 1,000 of the living population of that sex, it will be seen that the average mortality rate of the male population is slightly higher than that of the female.

In 1892, 3,357 male decedents and 3,407 female decedents were reported.

The death-rate of males to each 1,000 of the male population was 19.32.

The death-rate of females to each 1,000 of the female population was 18.89.

TABLE No. 21.

*Deaths at Age Periods, by Percentages, from 1883 to 1892, inclusive.**

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	Over 60.
1883.....	14.33	7.58	2.56	5.55	8.58	6.73	6.22	7.64	37.93
1884.....	16.22	7.36	2.61	5.30	7.93	6.26	6.33	7.75	38.38
1885.....	15.08	7.14	2.11	4.42	7.50	6.71	6.71	7.76	40.09
1886.....	16.89	7.70	2.86	4.82	7.73	6.55	6.12	7.47	38.86
1887.....	17.64	7.26	2.05	4.89	6.96	6.25	6.56	7.72	39.70
1888.....	19.23	7.63	2.04	4.93	7.07	6.00	5.53	7.57	38.72
1889.....	19.44	7.71	2.66	4.64	6.56	6.15	5.93	7.63	38.40
1890.....	16.23	6.67	1.99	4.28	7.04	7.42	6.62	9.17	40.49
1891.....	18.30	7.08	2.55	4.40	6.95	6.01	6.29	8.15	40.25
1892.....	16.17	6.64	2.18	4.39	6.70	6.63	6.60	8.76	41.77

* Not including those with age not stated, premature and still births.

Table No. 21 is interesting in showing how uniformly the mortality by age periods occurs, even when distributed

over a series of years. It will be seen that nearly one fourth of all the decedents are under five years of age—a fact to which the eyes of all who are interested in the welfare of the race should be directed. Many of the causes which contribute to such a fearful mortality among children might be avoided by concerted public action in supporting remedial and preventive measures. In this special field there remains much to be done by the sanitarian and the health officer.

TABLE No. 22.

*Deaths at Different Periods, compared with the number Living at the Same Period, 1892.**

	Deaths, 1892.	Persons living at same ages, census of 1890.	Death-rate per 1,000.
Under one year	1,225	6,141	199.47
Under five years	1,727	30,573	56.47
Twenty to thirty years.....	506	63,252	7.99
All others.....	5,466	253,166	21.59
All ages	7,699	376,530†	20.44

* Excluding still births and premature births. † Census of 1890.

Table No. 22 exhibits the number of deaths at different age periods compared with the number living at the same period, based upon the census of 1880, with the exception noted in the table. This table shows a death-rate per 1,000 of the population under one year of age of 199.47 as against 205.82 for the preceding year; and under five years of age, 56.47 as against 57.34 for 1891; between twenty and thirty, 7.99 in 1892, and 7.71 in 1891—practically the same; all others, 21.59 in 1892 and 18.90 in 1891; for all ages, the rate was 20.44 in 1892, and 18.65 the preceding year.

The difference in the death-rate between table No. 17 (20.88) and that of table No. 22 (20.44) is due to the exclusion of still births and premature births from the latter, while the former includes both.

Table No. 23 shows the number of deaths at different age periods by sex, from 1884 to 1892, inclusive. In the year 1892 there were returned 1,225 deaths of children under one year of age, not including still births and premature births; 502 between one and five; 165 between five and ten; 382 between ten and twenty; 506 between twenty and thirty; 501 between thirty and forty; 499 between forty and fifty; 661 between fifty and sixty; 975 between sixty and seventy; 1,185 between seventy and eighty; 864 between eighty and ninety; 129 between ninety and one hundred; 6 over one hundred; and 149 with age not stated.

Seventeen hundred and twenty-seven children died during the year before reaching five years of age—nearly a quarter of the total mortality of the state!

Total.....														

The above figures, except for census years, are estimated upon a basis of a steady increase in population in the same ratio as was shown between the census returns of 1880 and 1890. It is believed that these figures are approximately correct for the years represented.

TABLE No. 3.

*Births, Marriages, and Deaths, with the Population and Rates, for 1884 to 1892, inclusive.**

YEARS.	Population.	Births.	Marriages.	Deaths.	Birth-rate per 1,000.	Persons married to 1,000.	Death-rate per 1,000.
1884.....	358,845	6,247	3,292	6,194	17.40	18.34	17.26

Average.....

* Population estimated for all but census years.

Table No. 3 shows the population of the state, the number of births, marriages, and deaths, with the birth, marriage, and death rate to each 1,000 of the population for the years 1884 to 1892, inclusive.

An average for these years is also given.

BIRTHS.

There were returned for the year 1892, 7,746 births, or 236 more than there were reported the previous year, more than was ever recorded in a single year.

The birth-rate to each 1,000 of the population for the year is 20.57.

TABLE No. 4.

Births in Cities for 1892, with Rate per 1,000.

CITIES.	Population of 1890.	Births.	Birth-rate per 1,000.
Portsmouth.....	9,827	161	16.38
Dover.....	12,790	296	23.14
Concord	17,004	416	24.46
Manchester.....	44,126	1,029	23.31
Nashua.....	19,311	698	36.14
Keene	7,446	150	20.14
Rochester.....	7,396	137	18.52
Laconia.....	6,143	172	27.99
Somersworth	6,207	196	31.57

The birth-rate and percentages for the several cities are given in table No. 4.

TABLE No. 5.

Percentage of American and Foreign Births, by Counties, 1892.

COUNTIES.	PARENTS.			Births with parentage not stated.
	American-born.	Foreign-born.	One foreign born.

Grafton	430	78	84	26
Coös	198	257	120	20
Total for state	3,646	2,727	1,105	268

A statement of the births by counties for the past eleven years may be found in table I, page 4. Other facts relating to births may be found in tables III and IV.

MARRIAGES.

The number of marriages returned for the year 1892 is 4,074, the largest number ever reported in a single year, as will be seen by the following table:

TABLE No. 6.

Marriage-rates for 1882 to 1892, inclusive.

YEARS.	Marriages.	Persons married to 1,000 living.*	Number living to one marriage.
1882.....	3,433	19.44	103

1891.....	3,904	20.56	412	1 to 10.55
1892.....	4,074	21.30	347	1 to 11.74.

Other tables relating to divorces may be found on pages 42 and 43.

TABLE No. 16.

Ratio of Divorces, to Marriages, by Counties, for 1892.

COUNTIES.	Number of marriages.	Number of divorces.	Ratio of divorces to marriages.
Rockingham	502	33	1 to 15.21
Strafford	466	30	1 to 15.53
Belknap	208	27	1 to 7.70
Carroll	190	18	1 to 10.50
Merrimack	463	55	1 to 8.41
Hillsborough	1,252	89	1 to 14.10
Cheshire	269	32	1 to 8.40
Sullivan	152	8	1 to 19.00
Grafton	332	38	1 to 8.73
Cooks	240	17	1 to 14.12
Total	4,074	347	1 to 11.74

TABLE No. 17.

Deaths and Death-rates from 1884 to 1892, inclusive.

YEARS.	Deaths regis- tered.	Deaths to 1,000 of population.	Population.*
1884.....	6,194	16.26	358,845
1885.....	6,201	17.13	361,806
1886.....	6,426	17.61	364,767
1887.....	6,470	17.61	367,728
1888.....	6,854	18.48	370,689
1889.....	6,696	17.91	373,650
1890.....	7,368	19.56	376,530
1891.....	7,310	19.41	379,491
1892.....	7,988	20.88	382,452
Average	6,835	18.32

* Population estimated for all but census years.

Table No. 17 gives the number of deaths returned for each year from 1884 to 1892, inclusive, with percentage to each 1,000 of the estimated population.

It will be seen by this table that the death-rate per 1,000 of the population for the year 1892 is 20.88, the highest recorded during the period embraced in the table. This rate is somewhat in excess of what we believe should be maintained in this state.

Table No. 18 shows the number of deaths and the death-rate per 1,000 of the population, census figures. The percentages being based upon the census returns, cannot, of course, be absolutely correct, excepting for the year 1890; therefore the total percentage for 1892 is in this table too high. The figures given in table No. 17 (20.88 per 1,000) are more nearly correct.

The highest death-rate in any county for the year 1892 is in Strafford—22.47, followed by Hillsborough 22.43, Belknap 21.65, Merrimack 21.52, Sullivan 21.49, Rockingham 20.66, Cheshire 20.55, Grafton 20.01, Carroll 18.87, Coos 18.13.

TABLE No. 19.

*Percentages of Deaths, by Quarters, from 1884 to 1892, inclusive.**

YEARS.	PERCENTAGES OF DEATHS FOR QUARTERS ENDING WITH			
	March.	June.	September.	December.
1884.....	23.23	23.40	26.63	26.74
1885.....	27.27	26.66	24.32	21.75
1886.....	23.75	23.27	28.90	24.08
1887.....	24.56	24.02	27.77	23.65
1888.....	25.94	23.72	26.82	23.52
1889.....	23.70	24.16	27.38	24.76
1890.....	28.82	21.63	26.71	22.84
1891.....	22.36	21.15	26.89	26.58
1892.....	34.97	21.41	23.99	19.63

* Not including deaths with month not stated, premature and still births.

Table No. 19 shows the percentages by quarters, from 1884 to 1892, inclusive. The variation in the percentages for 1892 from those given for the previous year is very

marked, and is due to the erratic course of the epidemic influenza. In 1891 this disease prevailed more severely in the second and fourth quarters of the year, while in 1892 its greatest mortality was in the first quarter of the year. Again in 1892 there was a great reduction in the death-rate from cholera infantum, which reduces the percentage of the third quarter below that of any previous record.

The rate for the first quarter of the year 1892 is 34.97 of the total mortality; second quarter 21.41, third quarter 23.99, fourth quarter 19.63.

TABLE No. 20.

Mortality of Males and Females compared 1884 to 1892 inclusive.

YEARS.	Male decedents.	Female decedents.	Male decedents to 100 female decedents.	Death-rate of males to 1,000 male population.	Death-rate of females to 1,000 of female population.
1884.....	3,084	3,122	97.18	17.79	17.69
1885.....	2,948	3,194	92.29	17.28	18.09
1886.....	3,155	3,212	98.20	18.50	18.20
1887.....	3,174	3,267	97.15	18.61	18.51
1888.....	3,419	3,382	101.09	20.04	19.16
1889.....	3,253	3,389	95.98	19.07	19.20
1890.....	3,692	3,624	101.87	21.65	20.53
1891.....	3,557	3,453	103.01	19.60	17.65
1892.....	3,981	3,990	99.77	21.33	21.00
Average.....	3,357	3,407	98.50	19.32	18.89

Table No. 20 exhibits the mortality of males and females compared for the years 1884 to 1892, inclusive. With the

exception of the years 1888, 1890, and 1891, the female decedents have exceeded the males. By a comparison of the death-rates of the respective sexes to each 1,000 of the living population of that sex, it will be seen that the average mortality rate of the male population is slightly higher than that of the female.

In 1892, 3,357 male decedents and 3,407 female decedents were reported.

The death-rate of males to each 1,000 of the male population was 19.32.

The death-rate of females to each 1,000 of the female population was 18.89.

TABLE No. 21.

*Deaths at Age Periods, by Percentages, from 1883 to 1892, inclusive.**

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	Over 60.
1883.....	14.33	7.58	2.56	5.55	8.58	6.73	6.22	7.64	37.93
1884.....	16.22	7.36	2.61	5.30	7.93	6.26	6.33	7.75	38.38
1885.....	15.98	7.14	2.11	4.42	7.50	6.71	6.71	7.76	40.09
1886.....	16.89	7.70	2.86	4.82	7.73	6.55	6.12	7.47	38.86
1887.....	17.64	7.26	2.05	4.89	6.96	6.25	6.56	7.72	39.70
1888.....	19.23	7.63	2.04	4.93	7.07	6.00	5.53	7.57	38.72
1889.....	19.44	7.71	2.66	4.64	6.56	6.15	5.93	7.63	38.40
1890.....	16.23	6.67	1.99	4.28	7.04	7.42	6.62	9.17	40.49
1891.....	18.30	7.08	2.55	4.40	6.95	6.01	6.29	8.15	40.25
1892.....	16.17	6.64	2.18	4.39	6.70	6.63	6.60	8.76	41.77

* Not including those with age not stated, premature and still births.

Table No. 21 is interesting in showing how uniformly the mortality by age periods occurs, even when distributed

over a series of years. It will be seen that nearly one fourth of all the decedents are under five years of age—a fact to which the eyes of all who are interested in the welfare of the race should be directed. Many of the causes which contribute to such a fearful mortality among children might be avoided by concerted public action in supporting remedial and preventive measures. In this special field there remains much to be done by the sanitarian and the health officer.

TABLE No. 22.

*Deaths at Different Periods, compared with the number Living at the Same Period, 1892.**

	Deaths, 1892.	Persons living at same ages, census of 1890.	Death-rate per 1,000.
Under one year	1,225	6,141	199.47
Under five years	1,727	30,573	56.47
Twenty to thirty years	506	63,252	7.99
All others	5,466	253,166	21.59
All ages	7,699	376,530†	20.44

* Excluding still births and premature births. † Census of 1890.

Table No. 22 exhibits the number of deaths at different age periods compared with the number living at the same period, based upon the census of 1880, with the exception noted in the table. This table shows a death-rate per 1,000 of the population under one year of age of 199.47 as against 205.82 for the preceding year; and under five years of age, 56.47 as against 57.34 for 1891; between twenty and thirty, 7.99 in 1892, and 7.71 in 1891—practically the same; all others, 21.59 in 1892 and 18.90 in 1891; for all ages, the rate was 20.44 in 1892, and 18.65 the preceding year.

The difference in the death-rate between table No. 17 (20.88) and that of table No. 22 (20.44) is due to the exclusion of still births and premature births from the latter, while the former includes both.

Table No. 23 shows the number of deaths at different age periods by sex, from 1884 to 1892, inclusive. In the year 1892 there were returned 1,225 deaths of children under one year of age, not including still births and premature births; 502 between one and five; 165 between five and ten; 332 between ten and twenty; 506 between twenty and thirty; 501 between thirty and forty; 499 between forty and fifty; 661 between fifty and sixty; 975 between sixty and seventy; 1,185 between seventy and eighty; 864 between eighty and ninety; 129 between ninety and one hundred; 6 over one hundred; and 149 with age not stated.

Seventeen hundred and twenty-seven children died during the year before reaching five years of age—nearly a quarter of the total mortality of the state!

* Excluding those with age and sex not stated, and premature and still births.

Table No. 24 shows the percentages of death, by age periods and sex, to the total mortality from 1884 to 1892, inclusive. Tables 24 and 25 are interesting and instructive inasmuch as they give the number of deaths and the percentage to the total mortality by age periods, for the eight years embraced in the tables.

Table No. 24 presents another graphic view of the slaughter of the innocents. The fearful mortality of early childhood is vividly illustrated in the first two columns of percentages. It is in tables like these that statistics reveal the terrible truth, and without which we would be ignorant of the true facts.

TABLE No. 25.

*Deaths of Children under Five Years of Age, by Seasons, 1892.**

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
Months	190	123	145	97	122	108	223	261	165	122	83	84
Quarters	458			327			649			289		
Percentages....	26.58			18.98			37.66			16.78		
Half-years				785						938		
Percentages....				45.56						54.44		
Total deaths..							1,723					

* Not including deaths with month not stated, premature and still births.

This table represents the mortality of children under five years of age, by seasons, for the year 1892. The greatest mortality of the year occurred in the quarter embracing the months of July, August, and September, and was 37.66 per cent. of the total mortality among children, as against 26.58 per cent. for the first quarter, 18.98 per cent. for the second, and 16.78 per cent. for the last quarter of the year.

There were 1,727 deaths among children under five years of age during the year, four with month not stated not appearing in table No. 26.

For the year 1891 the percentages were as follows: First quarter, 17.73; second quarter, 18.02; third quarter, 41.72; last quarter, 22.51.

TABLE No. 26.
*Total Deaths by Seasons, 1892.**

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
Months	1,345	694	648	607	569	469	625	660	558	511	515	481
Quarters		2,687			1,645			1,843			1,507	
Percentages..		34.97			21.41			23.99			19.63	
Half-years....			4,332						3,350			
Percentages..			56.38						43.62			
Total deaths..						7,682						

* Not including deaths with month not stated, premature and still births.

Table No. 26 gives the total number of deaths at all ages, by seasons, for the year 1892. There was a total of 7,682 deaths, not including those with month not stated, premature and still births. The greatest mortality was in the month of January, 1,345, and the least in June, 469. The percentages, by quarters, were as follows: First quarter, 34.97; second quarter, 21.41; third quarter, 23.99; last quarter, 19.63.

The percentage for the first half of the year is 56.38; for the last half, 43.62.

The heavy percentage for the first quarter is due to epidemic influenza which prevailed severely during that period.

TABLE No. 27.

Nativity of Persons Deceased for 1892, by Counties.

COUNTIES.	Total deaths.*	NATIVE BORN.		FOREIGN BORN.	
		Deaths.	Percentages.	Deaths.	Percentages.
Rockingham.....	1,026	832	89.75	95	10.25
Strafford.....	864	681	84.39	126	15.61
Belknap.....	440	329	92.41	27	7.59
Carroll.....	342	269	95.39	13	4.61
Merrimack.....	1,064	883	90.29	95	9.71
Hillsborough.....	2,092	1,468	78.92	392	21.08
Cheshire.....	608	497	90.36	53	9.64
Sullivan.....	382	322	89.94	36	10.06
Grafton.....	749	607	94.11	38	5.89
Coös.....	421	267	81.90	59	18.10
Total.....	7,988	6,155	86.82	934	13.18

* Including those whose nativity was not recorded. In the calculations of percentages, the rates are not given to the *total* reported deaths, but only to the total of those cases where the nativity was stated.

Table No. 27 gives the nativity of the decedents for the year 1892, together with the percentages of each, by counties. The greatest number of foreign-born decedents, as well as the highest rate, was in Hillsborough county, where there is a larger foreign-born population, being 392 or 21.08 per cent. Coös follows with 18.10, Strafford 15.61, Rockingham 10.25, Sullivan 10.06, Cheshire 9.64, Merrimack 9.71, Belknap 7.59, Grafton 5.89, Carroll 4.61.

The total foreign-born decedents for the state was 934,

a rate of 13.18. This rate for the previous year was 13.47, and for 1890 13.55. The uniformity of percentages for the three years given is noticeable.

TABLE No. 28.

Nativity of Persons Deceased from 1884 to 1892, inclusive.

YEARS.	Total deaths.*	NATIVE BORN.		FOREIGN BORN.	
		Deaths.	Percentages.	Deaths.	Percentages.
1884.....	6,194	4,868	89.01	601	10.99
1885.....	6,201	4,847	89.35	578	10.65
1886.....	6,426	4,969	88.52	647	11.48
1887.....	6,479	5,131	88.08	698	11.97
1888.....	6,854	5,449	87.53	776	12.47
1889.....	6,696	5,383	88.00	734	12.00
1890.....	7,368	5,672	86.45	889	13.55
1891.....	7,310	5,637	86.52	878	13.47
1892.....	7,988	6,155	86.82	934	13.17

*Including those whose nativity was not recorded. In the calculations of percentages, the ratios are not given to the total reported deaths, but only to the total of those cases where the nativity was stated.

Table No. 28 shows the number of native and foreign-born decedents in the state for each year from 1884 to 1892, inclusive, with percentages of each.

Of a total of 7,988 deaths in the state returned for the year 1892, 6,155, or 86.82 per cent., were native-born, and 934, or 13.17 per cent., foreign-born.

TABLE No. 29.
Deaths in 1892 of Persons Aged One Hundred Years, or more.

NAME.	Date of death.	AGE.			Place of death.	Birthplace.	Single, married, or widowed.
		Years.	Months.	Days.			
Mitchel Rivers	January 20.....	106	6	Hillsborough....	Scotland	Single, married, or widowed.
Aaron Nichols.....	January 27.....	100	8	21	Bow	Bow	Married.
Parkman Brooks.....	February 12.....	100	No. Charlestown	Widowed.
Hugh Rogers.....	March 4.....	100	Dover.....	Ireland.....	Married.
Amy Sawyer.....	November 26.....	103	Barrington.....	Barrington..	Widowed.

TABLE No. 30.
Causes of Death, by Classes, from 1884 to 1892, inclusive.

	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.
I.—Zymotic diseases.....	907	890	1,085	1,073	1,097	1,172	1,155	1,301	1,344
II.—Constitutional diseases.....	1,276	1,271	1,284	1,222	1,200	1,114	1,309	1,095	1,167
III.—Local diseases.....	2,594	2,637	2,610	2,731	2,984	2,852	3,146	3,149	3,531
IV.—Developmental diseases.....	857	848	948	952	1,016	1,041	1,150	1,141	1,057
V.—Violent deaths.....	201	225	206	218	234	233	271	271	233

There were returned for the year 1892, 7,988 deaths, of which 3,981 were males, 3,990 females, and 17 with sex not stated.

Table No. 31 gives the causes of deaths, by classes, for the years 1884 to 1892, inclusive.

There were attributed to the zymotic diseases 1,344 deaths; constitutional diseases, 1,167; local diseases, 3,531; developmental diseases, 1,057; and to violent deaths, 283. There was a marked increase of deaths in the local diseases over the number reported in 1891.

TABLE No. 31.

*Percentage of Causes of Death, by Classes, from 1884 to 1892, inclusive.**

YEARS.	CLASSES.				
	Zymotic.	Constitutional.	Local.	Developmental.	Violent deaths.
1884.....	15.9	22.4	45.7	12.3	3.5
1885.....	13.9	22.2	46.0	12.2	3.6

1890.....	17.0	19.3	46.5	13.1	4.0
1891.....	19.5	16.4	47.2	12.8	4.0
1892.....	18.9	16.4	49.7	10.8	4.0

* Excluding deaths from unspecified causes, premature and still births.

Table No. 32 gives the percentages of causes of death, by classes, excluding deaths from unspecified causes, premature and still births, from the year 1884 to 1892, inclusive. This table presents substantially the same information as table No. 31, but in the form of percentages. The relative fatality of each class of diseases is vividly shown. The increase of the percentage of deaths from local diseases during the period included in the table as well as the decrease of developmental diseases is especially marked.

TABLE No. 32.
Causes of Death, by Classes and Counties, 1892.

Coos	92	21.85	59	14.01	160	38.00	59	14.01	16	3.80	35	8.31	421
Total	1,844	16.83	1,167	14.61	3,631	44.20	1,057	13.23	283	3.54	606	7.59	7,988

Table No. 32 gives the causes of death, by classes and counties, for 1892, with the percentages of each to the total number of deaths, and including deaths from unspecified causes, premature and still births, which accounts for the differences in the percentages in tables 31 and 32; the former gives the percentage of each class to the total number of specified causes, excluding premature and still births, while the latter gives the percentage of each class to the total number of all classes.

The highest percentage in the zymotic class is in Coös county, 21.85; Belknap, 21.82; Sullivan, 18.06; Hillsborough and Strafford, each 17.59; Cheshire, 16.61; Merrimack, 15.51; Rockingham and Grafton, each 14.81; Carroll, 11.11. The percentage of deaths in this class for the entire state is 16.83 to the total mortality, as against 17.79 for 1891.

In the constitutional class the variation of percentages is not so marked, the highest being 18.22 in Rockingham county, followed by 16.34 in Carroll, 15.16 in Strafford, 15.04 in Merrimack, 14.14 in Cheshire, 14.01 in Coös, 13.86 in Belknap, 13.48 in Hillsborough, 12.95 in Grafton, and 12.57 in Sullivan. The percentage for the whole state is 14.61, and for the previous year 17.76.

In the class of local diseases the rates are as follows: Sullivan, 54.97; Carroll, 52.63; Grafton, 49.53; Cheshire, 46.38; Merrimack, 45.44; Belknap, 43.86; Rockingham, 43.49; Strafford, 43.40; Hillsborough, 39.67; Coös, 38.00. Average for the state in this class, 44.20. In the developmental class the average rate is 13.23, the highest being 14.47 in Merrimack county, and the lowest 8.77 in Carroll county. There were 283 deaths from violent causes, and 606 from unspecified causes.

Table No. 33 shows the mortality from prominent zymotic causes. Cholera infantum heads this list, but it will be noticed that there were 120 deaths less from this cause in 1892 than in the preceding year. Croup, with 45

deaths, shows a lower mortality than for any of the years included in the table. Diphtheria, with 134 deaths for 1892, is the lowest recorded since 1885. The same is true of dysentery.

Typhoid fever was responsible for 109 deaths, which is considerably less than ever before recorded in New Hampshire in a single year.

Deaths from whooping cough, measles, and scarlet-fever, show an increase over the preceding year.

The total number of deaths from zymotic diseases, 942, is the lowest figure reached since 1885.

TABLE No. 33.

Mortality from Prominent Zymotic Diseases from 1884 to 1892, inclusive.

YEARS.	DISEASES.

1892	43	35	235	24	25	17	10	736	16	24
Average	67	33	221	22	35	18	10	772	23	20

* Not classed separately.

The mortality from the chief constitutional diseases from 1884 to 1892, inclusive, is shown in table No. 34.

The total number of deaths recorded in this class for the year 1892 is 1,165, of which pulmonary tuberculosis is responsible for 736.

The uniformity of the number of deaths from cancer for the past nine years, the period covered by the table, is striking.

TABLE No. 35.

Mortality from Principal Local Diseases from 1884 to 1892, inclusive.

YEARS.	DISEASES.												
	Apoplexy.	Paralysis.	Convulsions.	Cephalitis.*	Brain disease.	Heart disease.	Bronchitis.	Pneumonia.	Enteritis.	Gastritis.	Peritonitis.	Liver disease.	Bright's disease, nephritis, and other kidney diseases.

Average.....	242	244	79	149	128	545	138	604	60	53	59	61	173

* Meningitis and cerebritis included.

Table No. 35 gives the mortality from the principal local diseases from 1884 to 1892, inclusive. The annual average for the eight years is 2,544, the total for 1892 being 3,105, as against 2,743 in 1891. An almost startling feature of this table is the large increase in the number of deaths from pneumonia, not only over the previous year, but for the entire period represented.

There were 890 deaths from pneumonia, 571 from heart

disease, 308 from apoplexy, 217 from bronchitis, 209 from paralysis, 188 from cephalitis, 222 from Bright's disease, 140 from brain diseases, 94 from peritonitis, 78 from convulsions, 72 from enteritis, 68 from gastritis, 48 from liver disease.

DIAGRAM NO. 1.—SHOWING THE COMPARATIVE MORTALITY, BY ABSOLUTE NUMBER OF DECEDENTS FROM TWENTY PROMINENT CAUSES OF DEATH DURING YEAR ENDING DECEMBER 31, 1892.

CONSUMPTION (PULMONARY TUBERCULOSIS).

Table No. 37 gives a comparative view of the twenty most prominent causes of death for the past nine years—from 1884 to 1892, inclusive,—diagram No. 1 shows the relative mortality from the same causes for the year 1892. Heretofore in both tables and diagrams, consumption has stood at the head in the magnitude of mortality, but this year it is outstripped by pneumonia. This is not because the former disease has been diminished, but because pneumonia has very largely increased, as will be seen by reference to other tables.

The average number of deaths from pulmonary phthisis for the past nine years is 772, annually, while for the year 1892 it is 736, thirty-six below the average, but forty-one more than was recorded the previous year. It appears from a study of table No. 18, that the disease is being somewhat reduced, although there are too many factors entering into the statistics of this malady to make the conclusion a positive one in so short a period as nine years.

The following table (No. 38) illustrates the comparative mortality of pulmonary phthisis for the period mentioned:

TABLE No. 38.

Mortality from Consumption from 1884 to 1892 inclusive.

YEARS.	Deaths.	Percentages of deaths to deaths from all causes.	Death-rate per 10,000 living population.
1884.....	865	14.01	24.18
1885.....	857	13.82	23.68
1886.....	809	12.58	22.17
1887.....	766	11.82	20.82
1888.....	742	10.82	20.01
1889.....	651	9.72	17.42
1890.....	825	11.19	21.91
1891.....	695	9.51	18.31
1892.....	736	9.21	19.24

The mortality from consumption, the percentage of the same to the total mortality, and the rate per 10,000 of the population, is shown in the above table, for the years 1884 to 1892, inclusive.

Table No. 39 shows the mortality from this disease, for the same period by counties, with percentages to the total mortality.

For 1892 the rates are as follows: Rockingham 12.96, Carroll 10.53, Strafford 9.72, Merrimack 9.40, Cheshire 9.21, Hillsborough 8.36, Belknap 7.95, Grafton 7.77, Coös 7.60, Sullivan 7.07.

The average for the state is 9.21.

SUMMARY OF OBSERVATIONS.

Ages.....	4 Under 10.	2 10 to 15.	2 15 to 20.	2 20 to 30.	2 30 to 40.	2 40 to 50.	2 50 to 60.	2 60 to 70.	2 70 to 80.	2 Over 80.	Not stated.					
Nativity.....													28	3	4	
Males.....													22			
Females.....													13			

Percentage to total mortality of city, 8.43.

Table No. 41 is a record of consumption in the city of Concord for the year 1892. There were 35 deaths from this disease—22 males and 13 females; 28 American-born, 3 foreign-born, and 4 with nativity not stated. The mortality by months was as follows: October, 6; July, 5; March and November, each 4; April and August, each 3; January, February, June, and December, each 2; May and September, each 1.

Four decedents were under 10 years of age; 2 between 15 and 20; 18 between 20 and 30; 8 between 30 and 40; 6 between 40 and 50; 2 between 50 and 60; 2 between 60 and 70; 3 between 70 and 80.

TABLE No. 42.

*Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity,
1892, for the City of Nashua.*

Months.....	1 January.	1 February.	6 March.	April.	3 May.	2 June.	1 July.	3 August.	1 September.	2 October.	2 November.	3 December.	Total.	American.	Foreign.	Not stated.
Quarters.....	3			5			5			5			26			
Ages.....	Under 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	Over 80.	Not stated.					
Nativity.....	1		1	12	5	4		1			2			13	7	6
Males.....													10			
Females.....													16			

Percentage to total mortality of city, 6.46.

This table is a record of the same disease in the city of Nashua for the year 1892, the total number being 26—10 males and 16 females; 13 American-born, 7 foreign-born, and 6 not stated.

Six died in March; 3 each in May, August, October, and December; 2 each, in June and November; 1 each, in January, February, July, and September.

One of the decedents was under 10 years of age; 1 between 15 and 20; 12 between 20 and 30; 5 between 30 and 40; 4 between 40 and 50; 1 over 60; and 2 age not stated.

TABLE No. 43.

*Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity,
1892, for the City of Portsmouth.*

Months.....	1 January.	3 February.	4 March.	3 April.	2 May.	3 June.	4 July.	2 August.	2 September.	3 October.	2 November.	5 December.	Total.	American.	Foreign.	Not stated.
Quarters.....	3			3			3			13			37			
Ages.....	Under 10. 10 to 15. 1 3			20 to 30. 30 to 40. 15 5			50 to 60. 60 to 70. 3 5			Over 80. Not stated. 1 1						
Nativity.....														26	10	1
Males.....													18			
Females.....													19			

Percentage to total mortality of city, 17.62.

The mortality from consumption in the city of Portsmouth for the year 1892 was 37, as against 17 reported the previous year—18 males and 19 females. In October there were 6 deaths; in December, 5; in March and July, 4 each; in February, April, and June, 3 each; in May, August, September, and November, 2 each; in January, 1.

One of the decedents was between 10 and 15 years of age; 3 between 15 and 20 years; 15 between 20 and 30; 5 between 30 and 40; 3 between 40 and 50; 3 between 50 and 60; 5 between 60 and 70, and 1 over 80; 1 age not stated. Twenty-six were American-born, 10 foreign-born, and 1 nativity not stated.

TABLE No. 44.

*Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity,
1892, for the City of Dover.*

Months.....	January. 4	February. 4	March. 5	April. 4	May. 3	June. 1	July. 1	August. 3	September. 3	October. 3	November. 2	December. 4	Total.	American.	Foreign.	Not stated.
Quarters.....	13			8			7			9			37			
Ages.....	3 Under 10.	2 10 to 15.	3 15 to 20.	6 20 to 30.	10 30 to 40.	5 40 to 50.	3 50 to 60.	3 60 to 70.	1 70 to 80.	1 Over 80.	Not stated.					
Nativity.....														21	12	4
Males.....													11			
Females.....													26			

Percentage to total mortality of city, 11.17.

The number of deaths returned from the city of Dover for 1892 was 37, 11 males and 26 females.

Five died in March; 4, each, in January, February, April, and December; 3, each, in May, August, September, and October; 2 in November; 1, each, in June and July.

Three of the decedents were under 10 years of age; 2 between 10 and 15; 3 between 15 and 20; 6 between 20 and 30; 10 between 30 and 40; 5 between 40 and 50; 3 between 50 and 60; 3 between 60 and 70; 1 between 70 and 80, and 1 over 80.

TABLE No. 45.

Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity, 1892, for the City of Keene.

Months	January. 2	February. 2	March. 2	April. 2	May. 3	June. 1	July. 2	August. 2	September. 1	October. 1	November. 1	December. 1	Total.	American.	Foreign.	Not stated.

* One divorced.

Table No. 52 gives the nativity, civil condition, and sex of decedents, by counties, for 1892.

Out of a total of 736 deaths from this disease, 515 were American-born, 135 foreign-born, and 86 nativity not stated; 332 were married, 253 single, 80 widowed, and 71 condition not stated.

PNEUMONIA.

TABLE No. 53.

Mortality from Pneumonia, by Counties, from 1884 to 1892, inclusive.

COUNTIES.	YEARS.									Average.
	1884	1885	1886	1887	1888	1889	1890	1891	1892

Sullivan.....	21	22	23	22	30	31	32	31	62	30
Grafton.....	66	48	54	52	77	64	74	53	84	63
Coös.....	21	20	24	21	33	26	52	57	49	34
Total.....	436	504	466	556	628	582	703	673	890	605

Table No. 53 gives the mortality from pneumonia, by counties, from 1884 to 1892, inclusive, with averages for that period. The total number of deaths from this disease in 1892 was 890—217 more than was returned the previous year, and 285 greater than the average for the past nine years. For the first time in our registration reports pneumonia has reached the first place among the causes of mortality. The increase in the number of deaths from this disease is doubtless due to epidemic influenza, as the increased death-rate from pneumonia occurred largely in those months registering the highest mortality from influenza.

TABLE No. 54.

Mortality from Pneumonia from 1884 to 1892, inclusive, by Ages.

YEARS.	Under 1 year.	1 to 5.	5 to 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	Over 80.	Unknown.	Total.
1884.....	51	48	3	3	6	27	23	30	36	50	97	54	8	436
1885.....	69	49	8	4	11	15	27	32	37	72	105	74	1	504
1886.....	57	38	13	6	13	17	24	29	49	68	92	53	7	466
1887.....	68	33	7	5	13	28	32	40	48	89	121	68	4	556
1888.....	67	45	6	10	19	40	49	51	62	67	123	81	8	628
1889.....	61	50	8	12	17	29	36	40	48	98	100	79	4	582
1890.....	73	48	9	10	11	35	46	45	79	106	127	107	7	703
1891.....	73	43	15	6	11	43	31	38	74	109	126	95	9	673
1892.....	77	49	13	6	12	41	61	60	95	147	190	128	11	890

The mortality from pneumonia, by ages, from 1884 to 1892, inclusive, is given in the above table. It will be seen that the greatest number of deaths was in persons from 70 to 80 years of age. This disease is exceedingly fatal among the aged, as a comparison of these figures with the number of persons living in the different age periods will show.

TABLE No. 55.

Mortality from Pneumonia, by Months and Quarters, from 1884 to 1892, inclusive.

YEARS.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Not stated.
1884.....	55	55	51	52	32	13	14	11	5	28	51	67	2
1885.....	53	59	101	95	35	25	13	10	10	33	38	32	...
1886.....	32	44	73	51	51	33	22	18	18	24	46	54	...
1887.....	71	73	85	85	49	17	13	13	14	34	47	54	1
1888.....	72	95	75	73	76	24	16	23	21	43	36	72	2
1889.....	69	66	79	102	51	22	15	19	16	53	41	49	...
1890.....	213	74	69	43	47	35	18	9	23	23	69	79	1
1891.....	73	60	82	72	95	41	13	7	14	23	37	152	4
1892.....	384	110	83	86	57	21	5	11	19	21	34	54	5
Total.....	1,022	636	698	659	493	231	129	121	140	282	399	613	
Quarters.....	2,356			1,383			390			1,294			

Table No. 55 shows the mortality from pneumonia, from 1884 to 1892, inclusive. For 1892 the greatest number of deaths occurred in January, the large mortality of that month being a continuation of the almost epidemic prevalence of the disease which gave an excessive mortality in December of 1891. The smallest number of deaths was in August.

BRAIN DISEASES.

TABLE No. 56.

Mortality from Brain Diseases from 1884 to 1892, inclusive.

YEARS.	DISEASES.						
	Cephalitis. *	Apoplexy.	Paralysis.	Insanity.	Convulsions.	Brain diseases.	Total.
1884.....	120	192	248	22	99	134	815
1885.....	133	206	278	27	98	122	859
1886.....	141	220	249	24	71	127	832
1887.....	117	210	253	25	64	121	790
1888.....	143	243	273	37	88	112	896
1889.....	151	259	196	35	76	126	843
1890.....	186	263	251	28	65	140	933
1891.....	161	283	241	44	78	130	917
1892.....	173	308	209	33	78	140	941
Average	147	242	244	30	79	128	869

* Meningitis and cerebritis included.

Table No. 56 shows the number of deaths from brain diseases for the past nine years. While the variation in the total from year to year is not great, there seems to be a small increase during the past three years. /

DIARRHEAL DISEASES.

TABLE No. 57.

Mortality from Diarrheal Diseases from 1884 to 1892, inclusive.

YEARS.	DISEASES.					Total of diarrheal diseases.
	Cholera infantum.	Cholera morbus.	Diarrhea.	Dysentery.	Enteritis.	
1884.....	266	21	52	80	69	488
1885.....	219	20	40	40	57	376
1886.....	362	14	38	79	53	546
1887.....	336	16	38	53	57	500
1888.....	370	8	50	63	39	530
1889.....	353	12	68	67	56	556
1890.....	399	12	50	63	524
1891.....	486	16	46	51	73	672
1892.....	366	17	53	42	72	550
Average.....	351	15	43	58	60	527

This table exhibits the mortality from diarrheal diseases for the past nine years. Cholera infantum, which is responsible for a large proportion of the deaths recorded in this table, shows a large falling off from the previous year.

CHOLERA INFANTUM.

TABLE No. 58.

Mortality from Cholera Infantum from 1884 to 1892, inclusive.

YEARS.	Deaths.	Percentage of deaths to deaths from all causes.	Death-rates per 10,000 living (estimated population).
1884.....	266	4.29	7.41
1885.....	219	3.53	6.05
1886.....	362	5.63	9.92
1887.....	336	5.18	9.13
1888.....	370	5.39	9.98
1889.....	353	5.27	9.44
1890.....	399	5.41	10.59
1891.....	486	6.64	12.08
1892.....	366	4.58	9.57
Average.....	351	5.10	9.35

Deaths from cholera infantum for the past nine years are shown in this table; also percentages to all deaths and to the population.

TABLE No. 59.

Mortality from Cholera Infantum, by Ages, from 1884 to 1892 inclusive.

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	Over 80.	Unknown.	Total.
1884.....	214	48	1	..	1	2	266
1885.....	186	33	219
1886.....	283	77	2	362
1887.....	284	51	1	336
1888.....	298	70	2	370
1889.....	297	54	1	1	353
1890.....	343	52	4	399
1891.....	409	74	3	486
1892.....	320	41	4	1	366

This table shows that cholera infantum is emphatically a disease of early childhood.

TABLE No. 60.

Cholera Infantum, by Cities.

CITIES.	1883	1884	1885	1886	1887	1888	1889	1890	1891	1892

Total for state	278	268	219	362	336	370	353	399	436	366

Table No. 60 shows the mortality from cholera infantum by cities for the past nine years.

Manchester gives much the largest mortality, not only numerically, but in proportion to the population.

TABLE No. 61.
Cholera Infantum by Ages, Sex, and Months, particularly showing the number of Decedents in the Cities and Towns, returning the greatest Mortality from the disease, 1892.

Average..	69	142	212	1.02	2.10	3.12	1.85	3.85	5.70

The mortality from diphtheria and croup for the past nine years is shown in the above table.

From a sanitary stand-point the two diseases are considered identical.

TABLE No. 67.

Mortality from Typhoid Fever from 1884 to 1892, inclusive.

YEARS.	Deaths.	Percentages of deaths to deaths from all causes.	Death-rates per 10,000 living (estimated pop- ulation).
1884.....	187	2.21	3.81
1885.....	136	2.19	3.75
